TRACTION BULL BLOC AGM deep cycle

Bloc AGM:

Banner Traction Bull Bloc AGM batteries are valve-regulated, lead batteries for cyclical applications. As maintenance free block batteries, they are especially suited to the small traction segment.

The use of absorbent glass mat technology (microfibre nonwoven web) means that the electrolyte is bound in and therefore the batteries are maintenance-free and leak proof.

Applications

- Rehabilitation area
- Wheelchairs
- Camping
- Caddies
- Scooters
- Marine

Features

- Block batteries, 12V rated voltage
- Absolute maintenance-free throughout the life of the battery
- Low self-discharge
- High initial capacity
- Corrosion-resistant terminals
- Not classified as a hazardous item pursuant to FAA and IATA (according to Packaging Directive 806)
- Installation possible in any position

Design

- Positive electrode
Lead/calcium, high performance grid with pasted in active mass
- Negative electrode
Lead/calcium, high performance grid with pasted in active mass
- Microporous glass fibre separator
- Electrolyte
Sulphuric acid bound into a microfibre nonwoven web
- Terminals
Safety terminal with electrolyte-tight sealing
- Cell connections
Internal welding through the casing wall
- Cell plugs
Safety valve with overpressure ventilation system

The stated electrical values apply for loads in a fully charged condition and an ambient temperature of 20°C
Dual terminal = automotive post and stud terminal

Charging

Traction Bull Bloc AGM batteries may only be charged using special, voltage-regulated chargers. Standard chargers can quickly destroy the battery.

In line with our datasheets, the charge voltage is to be adjusted in accordance with the type of application.

All the dimensions and weights listed are subject to standard production tolerances. The electrical values are approximate.

Our products are subject to ongoing further development and therefore we retain the right to make alterations without any obligation to provide notification.
